DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114.

Applicant's submission filed on May 19, 2005 has been entered.

2. Claims 1-23 are currently pending.

Claim Objections

3. Claims 4, 5, 8, 9, 12, 13, 16, 17, 20, and 21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-3, 6, 7, 10, 11, 14, 15, 18, 19, 22 and 23 are rejected under 35 U.S.C. 102(e) as being anticipated by US Pat. Pub. No. 2003/0039650.

US '650 teaches isolating immune cells from a patient, exposing the cells to an activating agent, and reintroducing the cells to the patient. This method is used to treat autoimmune diseases such as rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease, diabetes, Sjogren's syndrome and other autoimmune diseases (see pages 13 and 14). The immune cells can be PBMCs (see paragraph 95). The immune cells are specifically taught to be CD4+ and CD8+ cells. NK T cells are not specifically disclosed; however, these cells would inherently be found in the PBMCs. The activating agents are anti-CD2, anti-Cd3 and TGF-beta (see paragraph 98). The reference specifically teaches against using IL-2 (see paragraph 104); thus, claims drawn to using this activating agent are consider allowable over this reference.

5. Claims 1-3, 6, 7, 10, 11, 14, 15, 18, 19, 22 and 23 are rejected. Claims 4, 5, 8, 9, 12, 13, 16, 17, 20, and 21 are objected to.
